RURAL DISTRICT COUNCIL OF
CRICKLADE AND WOOTTON BASSETT

111G56

### ANNUAL REPORT

of the

MEDICAL OFFICER OF HEALTH

and

CHIEF SANITARY INSPECTOR

for the Year 1955

# TO THE CHAIRMAN & MEMBERS OF THE RURAL DISTRICT COUNCIL OF CRICKLADE & WOOTTON BASSETT

Ladies and Gentlemen,

I have the honour to submit my Annual Report for the year 1955 on the state of the public health of the District together with that of the Chief Sanitary Inspector and Housing Officer.

I wish to record my appreciation and thanks for the wholehearted co-operation and assistance from the staff and also from other Departments of your Council.

I have the honour to be, Ladies and Gentlemen,

Your obedient servant,

R. S. McELROY,

Medical Officer of Health.

June, 1956.

#### **GENERAL STATISTICS**

Area of the District					45,911 acres
Number of Parishes					14
Estimated Population (i	including	servic	e perso	nnel)	16,310
Number of inhabited he	ouses (pe	rmane	(nt)		4,468
Rateable Value as at 1s	st April,	1955			£80,856
Sum Represented by a	Penny F	Rate			£325

**Population:** The estimated population of 16,310 shows a decrease of 100 compared with 1954.

Number of inhabited houses: The figure of 4,468 shows an increase of 85 over the previous year.

#### New houses erected in 1955:

By Local Authority	 	 	69
By Private Enterprise		 	21

#### **EXTRACTS FROM VITAL STATISTICS**

#### Live Births:

Births	Male	Female	Total
Legitimate Illegitimate	140 7	163 5	303 12
Total number of live births	147	168	315

Live birth-rate per 1000 population (corrected)	 20.1
Live birth rate for England and Wales	 15.0
Comparibility factor for the District	 1.04

#### Still Births:

H.	Births			Male	Female	Total
Legitimate Illegitimate				2	2	4
Total number		··· ill birth	 ns	2	$\frac{}{2}$	4

#### Deaths:

Deaths from all causes in the area. Male 65.	Female	60.	Total 125.
Death rate per 1000 population (corrected)			8.4
Death rate for England and Wales			11.7
Comparability factor for England and Wales			1.09

#### Infant Mortality:

Deaths of Infants under 1 year of age:

Deaths	Male	Female	Total
Legitimate Illegitimate	3	2	5 —
Total number of deaths	3	2	5

#### Deaths of Infants under 4 weeks of age:

Deaths	Male	Female	Total
Legitimate Illegitimate	3	1	4
Total number of deaths	3	1	4

#### Infant Death Rates:

(Number of infant	deaths	under	1 year	of age	per	1000	
live births)							15.9
Infant death rate	for Eng	land ar	nd Wal	es			24.9

#### Deaths from Cancer during 1955:

Age	Site					
Group	Lungs	Stomach	Breast	Other	Total	
30-40 41-50 51-60 61-70 71-80 81-90	1 1 1 —	_ _ _ 1 _ 1	_ _ _ _ 1	$egin{array}{c} 1 \\ 2 \\ 2 \\ 2 \\ 5 \\ 1 \\ \end{array}$	1 3 2 4 5	
TOTAL	2	2	1	13	18	

#### CAUSES OF DEATH:

		Male	Female

#### Scarlet Fever:

Compared with 1954 the incidence decreased from 17 to 8. On the whole the disease was of a mild nature.

#### Whooping Cough:

Compared with 1954 the number of cases notified decreased from 50 to 34. This number is equally divided between 5–15 and 15–25 age groups. Protection against the disease under County Council auspices is now available.

#### Diphtheria:

No cases were reported.

#### Measles:

In marked contrast to 1954 when no cases were reported the incidence in 1955 reached epidemic proportions (248).

#### Pneumonia:

4 cases were notified as compared with 5 in 1954.

#### **Dysentery:**

1 case was notified as against 2 in 1954.

#### Poliomyelitis:

1 case was notified but fortunately was non-paralytic and not fatal.

#### Food Poisoning:

52 cases were recorded in marked contrast to 1954 when no cases were notified. In almost all cases the causative organism was Salmonella typhi murium, particularly in respect of 46 cases in the parish of Wootton Bassett, which arose from the consumption of confectionery filled with artificial cream by a symptomless excretor employed by a large wholesale confectionery firm in a neighbouring district supplying retailers in Wootton Bassett parish.

#### **TUBERCULOSIS**

#### **New Cases**

Y	ear	No. of Cases
1955		 16
1954		 12
1953		 32
1952		 15
1951		 15

Distribution of new cases and deaths according to age and  $\sec x$  is as follows :—

	New		New		То	tal
Age	cases Male	Male Deaths	cases	Female Deaths	New Cases	Deaths
Under l year	_				_	
1-5 years	_	_		_		
5-15 years		_	1	_	1	_
15–25 years	1	_	3	_	4	
25–35 years	2	_	3	_	5	
35-45 years	1	_	_	_	1	
45–55 years	1		1	_	2	
55-65 years	2		_	_	2	
65 and over	_	_	1	_	1	
Age unknown	_	<u> </u>		_		
Total	7	_	9	_	16	

#### HOUSING OF TUBERCULOSIS PATIENTS

These cases are classified as follows:—

**Certificate No. 1.** Sputum-positive cases where re-housing is considered urgent for the prevention of infection.

**Certificate No. 2.** Where better housing would be desirable in order to improve and maintain the patient's health.

**Certificate No. 3.** Where improved housing would be beneficial but is not an urgent matter.

The following is a summary of the cases dealt with during the year :—

Type of case	No. cases referred	No. cases re-housed
Certificate No. 1 Certificate No. 2 Certificate No. 3	3 7 —	
Total	10	3

## GENERAL PROVISION OF THE HEALTH SERVICES FOR THE DISTRICT

#### **Laboratory Facilities:**

The Swindon Area Pathological Laboratory of the Oxford Regional Hospital Board caters for the needs of the District.

#### **Hospital Facilities:**

These are the responsibility of the Oxford Regional Hospital Board.

The main general hospitals are situated at Stratton St. Margaret (in the Highworth Rural District) and Swindon which also provide accommodation for Maternity cases in a separate institution.

Infectious Diseases are admitted to the Area Isolation Hospital, Swindon while the nearest Smallpox Hospital is located at Reading. Cases under the National Assistance Act, 1948 are admitted to Elm Court, Stratton St. Margaret.

#### Other Facilities:

Arrangements for the following health services operating in the District are made by the County Health Committee :—

Care of expectant and nursing mothers, and young children; Domiciliary Midwifery;

Health Visiting;

Home Nursing;

Vaccination and immunisation;

Ambulances and ambulance cars;

Domestic helps;

Services under Part III of the National Health Service Act, for the prevention of illness, care and after-care; and health education.

Mental Health Service.

#### **DIPHTHERIA IMMUNISATION**

Immunisation is carried out by General Practitioners and County Council Medical Officers and the following table gives details for the year under review.

Age Groups in years	Under 1	1 2 3 4	5-9 10-14	Total under 15
Primary Imms. completed during 1955	97	87	51	235
Reinf. injs. administered during 1955 Total immunised		4	312	316
child population at 31st Dec. 1955,	12	151 176 164 175	$\begin{array}{cccccccccccccccccccccccccccccccccccc$	3014

- \* Immunised before 1.1.51.
- † Immunised since 1.1.51.

#### **VACCINATION**

Age Groups in years	Under 1	1	2–4	5–14	15 or over
Vaccinations Re-Vaccinations	73	2	6	3	$\frac{2}{16}$

#### NATIONAL ASSISTANCE ACT, 1948

Section 47, Removal to Suitable Premises of Persons in need of Care and Attention.

During the year three cases were investigated but no action was necessary.

# REPORT OF THE CHIEF SANITARY INSPECTOR AND HOUSING OFFICER FOR THE YEAR 1955

To: The Chairman and Members of the Cricklade and Wootton Bassett Rural District Council.

#### Ladies and Gentlemen,

I have pleasure in presenting my twenty-sixth Annual Report on the work carried out in my Department.

#### HOUSING

Number	of New Houses and Flats erected during the year	
(a)	By Local Authority	69
(b)	By Private Enterprise	21
Inspecti	ion of Dwellings during the year	
(i)	Inspected for housing defects under Public Health Acts	24
(ii)	Inspected for housing defects under Housing Acts	215
(iii)	Number of dwellings found so dangerous or injurious to health as to be unfit for habitiation	32
(iv)	Number of dwellings found not to be in all respects reasonably fit for habitation	156
Remedy	y of defects by Informal Action	
	imber of dwellings rendered fit in consequence of formal Action	18
Action	under Statutory Powers (Public Health and Housing Acts)	
(A)	Proceedings under Sections 9, 10 and 16 of Housing Act, 1936.	
	(i) Number of dwellings in respect of which notices were served requiring defects to be remedied	Nil
	(ii) Number of dwellings rendered fit after service of formal notices :—

(ix)	Number of houses (including those already comprised in operative demolition orders) to be demolished in the five years as a result of action under Section 11	
	of the Housing Act, 1936	127

#### Part II

No applications for Certificates of Disrepair were made during the year and no action was taken under this part of the Act.

#### Housing Act 1949

There was a considerable increase in the number of applications for Improvement Grants in 1955. Applications were received from 40 persons in respect of the improvment of 46 houses. One application was refused and 4 were withdrawn after approval was given. The estimated cost of the work was £5,884 and grants totalled £2,878.

#### **Housing Applications**

In December all applications in the housing files which had been made by persons neither residing nor working in the district were cancelled. These amounted to 30.

There was a reduction of 56 in the number of applicants for council houses on December 31st as compared with the number on January 1st, 1955.

The total number of applicants on December 31st 1955 was 348, but as 69 houses were erected in the year there was a net increase of 13 applicants..

It will be noticed from the under-mentioned table that there are twice as many applicants who are householders than there are occupying rooms. Houses were built in the parish of Cricklade only and for this parish there is a reduction of 59 applicants. The number of applicants were reduced in all parishes excepting Clyffe Pypard and Wootton Bassett. The increase was only one for Clyffe Pypard, but the increase for Wootton Bassett parish was 20, and on December 31st there were more applicants for this parish than there were three years ago.

PARISH	No. of applicants on 31.12.55  who are house-holders rooms		Dec. Dec.		Increase (+) Decrease (-)	No. of applicants who were over-crowded 31.12.55

#### **Provision of New Houses**

Cricklade was the only parish in which a building programme was carried out in 1955, although one house was built in Purton completing the 1954 allocation. Of the 68 houses erected at Cricklade (one was sold later in the year) 20 were "Traditional", 38 were "Unity" and 10 were "Woolaway". The one house at Purton was a "Unity" 3-bedroom house.

The Cricklade traditional houses consisted of 4 four-bedroom, 10 three-bedroom and 6 aged person's dwellings, two-bedroom. The "Unity" houses were 20 three-bedroom and 18 two-bedroom, whilst the "Woolaway" houses consisted of 8 three-bedroom and 2 two-bedroom.

#### **Number of Houses**

The following table gives details of the total number of houses as on December 31st 1955 in each parish, the number of council houses, separating pre-war and post-war, and also the percentage of houses owned by the Local Authority.

PARISH	Total	No. of includin I	% of houses owned by		
	No. of		Erected post-war	Total	Local Authority
Ashton Keynes	267	17	18	35	13.1

56% of council houses are non-traditional.

Three council houses were sold during the year, two at Cricklade and one at Latton.

#### **Inspection of Council Houses**

Owing to the pressure of work only 12 inspections of council houses were made during the year.

**Temporary Dwellings** 

Huts at Blakehill, Cricklade were not re-let after becoming vacant. During the year Swindon Corporation and Highworth R.D.C. carried out their undertakings to re-house all persons from Blakehill who had made applications for houses in their districts. All who wished to be re-housed in the Cricklade and Wootton Bassett rural district, excepting three, were given council house tenancies at Culverhay, Cricklade. The three occupiers of huts remaining on December 31st wished to be re-housed at Wootton Bassett. Houses were allocated to them but were not ready for occupation at the end of the year.

All of the huts situate at Lydiard Park and owned by Swindon

Corporation are still being used.

The number of temporary dwellings on December 31st 1955 was:-

Cricklade (Blakehill)  Lydiard Park	 • • •	$\frac{3}{127}$
		130

Number of visits to temporary dwellings

No. of nuisances abated		 31
No. of inspections made for the purpo	ose	 124

#### **Verminous Premises**

Seven houses and one hut were found to be infested with fleas and were successfully treated. Two of the houses had been left infested by the vacating tenants. .

One new council house was found to be infested with book lice shortly after it was occupied. The infestation was cleared by the

use of Gammexane.

Twelve houses on an estate, two other houses and a piggery infested with flies were treated with DDT/Lindane, DDT in liquid and powder forms and Gammexane.

Number of visits to verminous premises .. 49

#### **Moveable Dwellings**

There was a reduction in the number of moveable dwellings in the district from 26 to 18. Of this number, 5 were licensed for the first time and the caravans were of a modern type. No complaints were received during the year in respect of any of the moveable dwellings.

Number of visits to moveable dwellings .. .. 21

#### **Smoke Abatement**

The new equipment for arresting grit and ash from the boiler stack of the United Dairies Milk Factory, Wootton Bassett, installed in 1954, gave excellent results and no complaint was received during the year.

#### **Drainage and Sewerage**

There are public sewers and sewage works in the parishes of Cricklade, Purton and Wootton Bassett only. At Lyneham there is a sewer and sewage works owned by the Air Ministry, and used for draining the aerodrome, houses occupied by R.A.F. personnel and the new Lyneham school.

Where post-war council houses have been erected in parishes not served by public sewers, small sewerage installations have been

provided, otherwise drainage is chiefly to cesspits.

Number of visits re drainage		80

#### **Public Conveniences**

The only public convenience in the district is situate at Wootton Bassett.

#### Refuse Collection and Disposal

A weekly collection of house refuse and salvage is carried out in all parts of the district, two 10 cub. yd. "Dennis" refuse vehicles being employed for the purpose.

Tipping is carried out in the old canal at Ballickaere, Cricklade, the old canal The Pry, Purton and on land at Wootton Bassett Sewage Works.

Although DDT is used against insects on the tips, an infestation of flies occurred for a time during the summer at the Wootton Bassett tip. As I have mentioned in my annual reports for some years, soil for tip covering is practically non-existent and this greatly increases the difficulty in the control of insect pests. As the result of the infestation, authority was given by the Council to purchase soil but fortunately the Contractors engaged in the building of council houses at Wootton Bassett wanted to dispose of surplus soil and this soil was sufficient to supply our immediate needs. This source ceased within a month, but by that time, the nuisance had also ceased. Even if it is only required for a period of 6 months (April to September) the purchase of soil for tip covering will be very expensive and will cost £400 to £500.

Lack of labour to carry out the work again caused difficulties at certain times, indeed it was "touch and go" on some days as to whether the refuse collection could be made on those days. However, since August there has been a full complement, but even so, a difficulty arises when a driver is away from work.

Excellent work has been carried out at the tips by your rodent

Operator in keeping rat infestation to a minimum.

Number of visits republic cleansing 233

Salvage

Collections of waste paper, rags and scrap metal were continued throughout the year. These waste materials are collected in trailers attached to the refuse lorries, at the same time as other refuse is collected.

There was an increase in the tonnage of waste paper collected

but the amount of scrap iron was less.

No difficulty whatsoever was experienced in the disposal of salvageable waste materials and there were two increases during

the year in the prices of waste paper.

There was an unfortunate occurrence in November—a wood building which had only been erected a few months previously for storage of waste paper, caught fire and was utterly destroyed, together with an estimated paper content worth £100. The cause was not established

Sales of waste materials were as follows:-

#### Milk Sampling

More than twice as many milk samples were taken during the year than in 1954.

There were 13 producer/retailers and samples of milk were taken from all, although 4 of them do not have a milk round.

Only 2 samples of pasteurised milk were taken as milk of this designation is sampled by other officers at the premises where the milk is pasteurised.

#### Number of Milk Samples taken

	Desig- nated	Non- designated	Pasteur- ised
For methylene blue tests only	82	58	
For methylene blue plus biological tests	37	_	
For biological tests only		5	-
For phosphatase test only	—	_	2
(	119	63	2

· A further 6 milk samples were submitted for biological examination but the guinea pigs which had been inoculated died.

Results of Milk Sampling

Biological test	37 100%	_	Biological test	5 100 %					

#### Ice Cream

The number of traders registered for the storage and sale of ice cream rose to 32 and 2 premises are registered for the manufacture, storage and sale of ice cream. The majority of the parishes in the district have a shop or shops selling one or other of the prepacked brands but none are registered until the provisions of the Foods and Drugs Act are satisfied. Even so the results of the check samples were not very satisfactory this year and in the case of one prepacked type it was necessary to report back to the district of manufacture on three occasions. Of the 17 samples taken non fæcal B.Coli was present in three samples and fæcal B.Coli in one. The fæcal B.Coli

appeared in the final sample from an ice cream manufacturer in the district with whom two inspectors had worked carefully to improve the grading from 4 to 1. It was disappointing having this contamination and goes to prove what extreme care in sterilisation is required to produce a first-class ice cream. A table of the samples is set out hereunder.

M. C.		Provisional Grading						
Manufacturer		1	2	3	4			
A Percentage B Percentage C Percentage D Percentage E Percentage		$\begin{array}{c} 2\\ 66\frac{2}{3}\%\\ 1\\ 33\frac{1}{3}\% \end{array}$	3 100 % 1 33\frac{1}{3}\frac{1}{3}\frac{2}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3}\frac{1}{3	2 40%	3 100 % 1 20 %			
Totals	• • •	4	7	2	4			
Percentages		23.75%	41.18%	11.76%	$ _{23.53\%}$			

#### Meat

Slaughtering was carried out at 8 slaughterhouses during the year. There has been 100% inspection of animals killed and an increase in the number of animals of nearly 10%.

There are two slaughterhouses where all the carcases and offal are for wholesale trade, the majority of the animals slaughtered being calves. At these premises a great amount of killing is carried out in the evenings and on Sundays.

There was a slight increase in the percentage of the total animals of all kinds found to be infected with disease, but the incidence of disease in calves and pigs was less than in 1954.

Only 12 out of 21,167 calves were condemned for congenital tuberculosis. Where information was available, the details relating to the market where the calves were bought, the number, weight, etc., was passed to the appropriate Ministry of Agriculture Veterinary Officer. The position was as follows;—

Calves bearing no Market ticket		3
Calves untraceable by the Veterinary Officer		2
Dams found to be negative when tested for tuberculosis		3
Dams found to be affected with tuberculosis		4
Number of visits to and inspections made at slaughter houses	er- 	1271
Number of visits made to butchers' shops		9

It will be noted that there is an increase in the percentage of cattle, especially of cows, found to be affected with disease. This was due to the fact that a number of casualty cattle were brought for slaughter.

#### **Tuberculosis in Calves**

The record low percentage of calves found to be affected with tuberculosis in 1954 was broken in 1955. The figure of 0.11% was the lowest since the keeping of accurate figures of the incidence of tuberculosis in calves was started in 1940. You will note the steady decrease from the 5 year figures given below, the incidence in 1955 being nearly one-seventh of that in 1940.

Year	No. of calves killed	No. of tubercular calves	Percentage of calves affected with tuberculosis
1940	14095	102	0·72
1945	16985	101	0·60
1950	21397	71	0·33
1955	21167	24	0·11

#### Slaughter of Animals Act

There were 19 licensed slaughtermen in the district on December 31st 1955.

#### Knacker's Yard

The licence for the premises at one time used for a knacker's yard was not renewed in 1955.

#### Other Foods

There was again a reduction in the amount of other foods condemned as unfit for human consumption. Condemnations were as follows:—

			Tins
Corned Beef		 	 7-12  oz.
Corned beef		 	 1-6 lb.
Corned mutton		 	 1-12  oz.
Jellied veal		 	 12–12 oz.
Gammon ham		 	 1–13 lb.
Gammon ham		 	 1–15 lb.
Evaporated mil	.k	 	 $7-\frac{3}{4}$ pint

#### **Food Premises**

Routine inspections of premises where food is prepared or stored continued throughout the year.

Attention of some shopkeepers had to be directed to the inadequate protection of foodstuffs, particularly in regard to food placed on counters and in one instance to vegetables being placed on the pavement.

Visits to the different types of premises where food is handled are as follows:—

No.	of	visits	to	ice cream premise	s			30
,,	,,	,,	,,	bakehouses				24
,,	,,	,,		fishmongers				1
,,	,,	,,	,,	grocers and fruite	rers			25

#### Food Poisoning

An outbreak of food poisoning towards the end of May in the parish of Wootton Bassett and surrounding parishes caused the staff of the department to be fully mobilised on an investigation which I consider stemmed what could have been a serious outbreak of food poisoning. Salmonella Typhi Murium was found to be the causative agent and this threw suspicion quickly on to confectionery being received from a wholesale bakery situated outside this rural district by several shops and a cafe in this district and subsequently employees engaged at the wholesale bakery were found to be harbouring a causative organism. Specimens from all the staff of the shops and cafe concerned showed positive specimens amongst some

of the workers and children, and this resulted in four workers being prohibited from working in the food premises until three consecutive fæcal specimens were found to be negative.

Until control was established and all precautions were being taken, a certain amount of cross infection took place and in all 42 cases were notified and 21 cases gave information of having been similarly affected. The outbreak was well controlled by the 2nd of June but surveillance of the shop workers continued until mid-August until final clearance of all concerned was obtained. In all 127 fæcal specimens were taken, 41 of which were found to be positive. The investigation involved 227 visits and with routine work continuing, was a matter for satisfaction. The staff were gratified by the appreciation of their work shown by the Council.

Later in the year fæcal specimens from the complete families of an old man who has been a typhoid carrier for a number of years were taken. All these families are dairy farmers and it was pleasing to get complete negative results proving that the precautions which had been advised in the matter were still being maintained. In this investigation 33 specimens were obtained with the complete cooperation from the persons involved.

At the end of the year five suspected cases of food poisoning were investigated but proved to be negative.

Number of visits re food poisoning .. .. 233

### **Licensed Premises**

A survey of 13 licensed premises was carried out in 1955.

Three inns did not have a constant hot water supply. Such supply was installed at one premise and the owners of another inn agreed to provide constant hot water.

An agreement made in 1954 that the Brewery Company would provide a constant hot water supply when electricity had been carried to the area, was ratified in 1955 and a new wash-up sink and electric water heater was provided.

Resulting from notices served in 1954, a sink and drainage were provided at one inn, a wash-up sink with hot water supply was installed at another whilst extensive alterations were in progress at the end of the year at the third premise.

Following a request for proper glass—washing facilities and a satisfactory completely new drainage system, the owners of one licensed premise preferred to dispose of the inn.

Number of visits to licensed premises ... .. 19

### FACTORIES ACTS 1937 AND 1948

There were 42 inspections made under the Factories Acts during the year.

At two premises there were defective sanitary conveniences and

there was unsuitable closet accommodation at another.

The nuisance at one of the above premises was abated by the provision of an automatic flushing eistern.

i ui ton	••	• •	• •	• •	
					19

In addition to this total, 8 outworkers were employed outside the district by glovers with premises in the district.

### WATER SUPPLIES

There was an ample yield of water from the combined sources of supply but the storage capacity was not sufficient, and the amount of water which could be delivered to the principal reservoir was limited to the quantity which could be pumped through a 10 inch main. When trouble occurred on this rising main the amount of water in the reservoir diminished rapidly and on a few occasions the reservoir became empty.

With the yearly addition to the number of houses and the growing increase in the amount used on farms, the water consumption has risen considerably.

The water from all sources is chlorinated but at Ashton Keynes, which is the main source, the water before treatment is of a very high purity.

There is no plumbo-solvency in any of the water supplies.

Analysis of water from three sources was made to determine the fluorine content. The analyst reported the fluorine contents to be low.

100 water connections were made to houses during the year. Of this number 90 were made to new houses. Formal action was taken resulting in 5 houses being connected and 2 were connected as the result of informal action,

#### Sources

The main source of water used for public supply is situate at Ashton Keynes, two boreholes being used. The next in importance of yield is the Clyffe Pypard supply which is obtained from an adit driven into the chalk hills. The broad town supply is obtained from a well, as is also the small source at Thornhill.

Water is supplied to a small number of premises at Clyffe Pypard from a private source.

### **Storage**

The following gives details of the water storage in the district:—

	Gallons
Reservoir at Hook	 500000
Reservoir at Cricklade	 60000
Elevated tank at Wootton Bassett	 50000
Underground tanks at Clyffe Pypard	 35000
Elevated tank at Ashton Keynes	 20000
Elevated tank at Purton (Pavenhill)	 20000
Underground tank at Purton (The Heading)	 17000
Elevated tank at Bradenstoke	 12000
Underground tank at Broad Town	 10000
· · ·	
	F04000

724000

# Distribution

The reservoirs at Hook and Cricklade and the tank at Ashton Keynes have water pumped to them from two boreholes situate at Ashton Keynes. In turn the tanks at Purton and Wootton Bassett are fed by gravity from Hook. A tank owned by the Air Ministry at Lyneham can be supplied by gravity from Hook but a booster pump also operates. Water from this tank is pumped to the Bradenstoke tank. From the storage reservoirs and tanks water mains radiate to supply services to all parishes.

# **Water Sampling**

During the year 65 samples of water were submitted for analysis, 62 for bacteriological and 3 for chemical examination.

Number of water samples taken:—Public supplies	53
Private supplie	

Five samples taken from public supplies were unsatisfactory and 3 were "suspicious". The source of pollution at the Clyffe Pypard supply was found and check samples showed the water to be satisfactory.

At 6 of the 8 private premises where the water was found to be unfit, there were no water mains in the vicinity to which the houses could be connected. Of the remaining 2 houses, one was connected to the water main and the other was vacated and remained unoccupied.

One of the above six private premises obtained water from the river Thames and at the end of the year the owner was awaiting delivery of a chlorinating plant instead of the unsatisfactory manual chlorination.

The detailed results of chemical analysis of water taken from public supplies are shewn hereunder :—

### THE PREVENTION OF DAMAGE BY PESTS ACT 1949

The owners and occupiers of agricultural and business premises are becoming more cognisant of the damage and loss caused by the rats and mice. A number are treating their premises themselves, others are requesting the local authority to carry out rat baiting.

Excepting local authority premises and the infestation by mice of business premises, the efforts mentioned above and the work carried out by your Rodent Operator, shows results in the figures given below of the percentage of properties which were inspected and found to be infested with rats and mice.

Owing to the nature of the local authority premises, viz., sewage works and refuse tips which cannot be made rat proof, and provide food for rats, the percentage of infestation is bound to be high.

As the sewers were found to be rat-free in 1954, no treatment of sewers was requested in 1955 by the Ministry of Agriculture (Infestation Control Division).

All local authority refuse tips and sewage works, including housing site installations, have been regularly inspected for rat infestation.

In one instance Zinc Phosphide was used on a refuse tip, otherwise, Warfarin has been used throughout the year.

From the following it will be seen that excepting in one instance, there is a continued fall in 1955 of the percentage of premises which were inspected and found to be infested.

	Reduction in	the percentage o
	Infe	estation

## Miscellaneous Sanitary Visits

Letters and complaints are still received from time to time involving visits to premises when it is found that the matters are either no concern of the Council or are subjects for other departments. These visits take up time to no purpose.

Number of Miscellaneous sanitary visits	llaneous sanitary visits 35		Number of Miscellaneous sanitary visits
-----------------------------------------	-----------------------------	--	-----------------------------------------

### **National Assistance Act**

Two cases occurred in which the Council had to deal with the burial of persons where no suitable arrangements for burial had been made.

One case concerned the burial of a child whose father had left his wife some years ago and the mother had no means.

In the other instance an old lady, living alone in a caravan situate outside the district, was killed within the district. No relatives were known and as there was no one to carry out the interment the burial had to be carried out by the Council. The

caravan was sold by the	Counc	il and t	he amo	ount pla	aced to	ward	ls the
cost of the burial. Number of visits re l	Nation	al Assis	tance A	Act			6
